NTU shows you how products work

NTU provides a basic introduction on how a product works, examines the different versions of a product and the main rating which are primarily used in product selection. Then, we will step through the product selection process using selection guides and other assets, helping you to understand different product ranges and part numbers.

NTU training can be conducted in person by arrangement, or remotely at a time that suits you.

Training modules include:

- Signalling devices
- Panelboards and load centres
- MCBs and RCDs
- Machine safety control systems
- Enclosures
- Climate control
- Electromechanical relays
- Contactors and overloads
- Motor starters and controllers
- Operator control devices
- Variable speed drives
- Energy metering
- ISO plugs, sockets and switches
- GPOs, isolators and switches
- Electric vehicle chargers
- Surge protection
- Terminal blocks
- Emergency and exit lighting

To access NTU modules, please reach out to your local NHP Account Representative.
